

CS 212 – Fall 2018 – Project 3

Assigned: 16 November 2018
Due: 28 November 2018
Cutoff: 3 December 2018

Create a File Menu in your GUI

Add a file menu to your DateGUI with options to open a file for reading, and one to Quit the program.

Create an new Exception for Dates

Create a new Exception called *Date212Exception*. The constructor of Date212 should throw this exception if an invalid date is read from the file. If this exception is thrown, the invalid date and the message from the exception should be printed to the console. You will need a FileMenuHandler class to handle the events from the FileMenu.

Create a jar file called **Project3.jar** and submit that to Blackboard by the due date for full credit.
